

Screenshot of a web browser showing the myCompiler.io interface. The browser tabs include Outlier, Create a new MySQL program, ChatGPT, Mysql Task Sakila - Google, and Mysql Task Sakila - Google. The address bar shows mycompiler.io/new/mysql.

The myCompiler interface has a dark theme. It features a search bar with "Search my programs..." and a magnifying glass icon. A dropdown menu shows "English" and "Recent". A user profile "ayshafida74" is visible.

A text input field says "Enter a title...". Below it is a button "+ Add tags (upto 10)".

On the left, there's a "MySQL" dropdown and a help icon (info symbol). On the right, there are "Run" and "Save" buttons.

The code editor contains the following MySQL query:

```
1 SELECT *
2 FROM genre_revenue
3 ORDER BY gross_revenue DESC
4 LIMIT 5;
```

The output panel shows an error message:

Output

```
ERROR 1146 (42S02) at line 1: Table 'mycompiler' is marked as crashed and should be repaired
[Execution complete with exit code 1]
```

At the bottom right, there's an advertisement for Namecheap: "Build your website for just \$3.88/mth. More value and performance with Namecheap." It features an illustration of a person in a space suit holding a tablet with a website icon.
